

## **Path Count Problem**

### **(Total Number Of Ways Reaching To A Particular Cell In A Matrix)**

#### **Problem Statement:**

Given a **2-D MATRIX** of **ANY SIZE** ( $m \times n$ ) and some **MOVEMENT CONSTRAINTS**, we need to find out the **TOTAL NUMBER of POSSIBLE PATHS/WAYS** to reach the **BOTTOM RIGHT CELL** starting from the **TOP LEFT CELL** in the matrix under the given **MOVEMENT CONSTRAINTS**.

Figure: Problem Statement of Path Count Problem

#### **Movement Constraints:**

From a cell, you can

- **move to the right**
- **move downwards**

From a cell, you can't

- **move to the left**
- **move upwards**
- **move diagonally (neither diagonally up nor diagonally down)**

**Allowed/Valid Path/Way Solutions:**

.....  
.....

.....  
.....

**Invalid/Not Allowed Path/Way Solutions:**

## Implementing the Path Count Problem using Dynamic Programming

### Overlapping Sub-problems Property:

<b>(0,0)</b>	(0,1)	(0,2)	(0,3)
(1,0)	(1,1)	(1,2)	(1,3)
(2,0)	(2,1)	(2,2)	(2,3)
(3,0)	(3,1)	(3,2)	<b>(3,3)</b>

### Optimal Substructure Property:

<b>(0,0)</b>	(0,1)	(0,2)	(0,3)
(1,0)	(1,1)	(1,2)	(1,3)
(2,0)	(2,1)	(2,2)	(2,3)
(3,0)	(3,1)	(3,2)	<b>(3,3)</b>
